### 11 – TOXICOLOGICAL INFORMATION

---

**HEALTH HAZARD SUMMARY:  
ACUTE & CHRONIC**

Under normal conditions of use, adverse health effects are not anticipated.

Due to the form of the products and low volatility, an inhalation hazard is not anticipated unless products are heated or sprayed.

Prolonged inhalation of silica, in excess of TLV, over an extended period of time may result in injury to the lungs and silicosis.

Lead Oxide. Classified 2B (Possible carcinogen for human.) by IARC. The substance is toxic to blood, kidneys, the nervous system, mucous membranes. May damage fertility or the unborn child. May cause serious eye damage, is suspected of causing genetic defects, is suspected of causing cancer, is harmful if swallowed, is harmful if inhaled. May cause respiratory irritation and may cause an allergic skin reaction.

Copper Carbonate is toxic to kidneys, lungs, liver, mucous membranes. Very hazardous in case of ingestion. Slightly hazardous in case of skin contact (irritant), of inhalation.

Nickel Oxide. Classified A1 (Confirmed for human.) by ACGIH, 1 (Proven for human.) by IARC, + (PROVEN) by OSHA. Classified 2 (Reasonably anticipated.) by NTP. The substance is toxic to lungs.

Strontium Carbonate dust maybe irritating to eyes, skin and respirator system.

**EYE:**

Irritant. Contact may result in irritation, lacrimation and redness.

**INHALATION:**

Very hazardous. Exposure considered unlikely. Due to the form of the products and nature of use, an inhalation hazard is not anticipated with normal use.

**SKIN:**

Mild irritants. Prolonged or repeated contact may result in mild irritation.

**INGESTION:**

Very hazardous. Ingestion is considered unlikely due to the form of the products. However ingestion via hand-mouth transfer may result in gastrointestinal irritation, nausea and vomiting. Maintain good personal hygiene standards.

### 12 – ECOLOGICAL INFORMATION

**ENVIRONMENT:**

Copper is very toxic to aquatic life.

Lead and lead compounds will partially settle out due to their fairly low solubility and partially dissolve. In soil, lead and lead compounds are generally not very mobile or bioavailable, as they can be strongly absorbed on soil particles, increasingly over time. It also forms complexes with organic matter and clay minerals that limit its mobility. When released into the soil, this material is not expected to leach into groundwater.

Other products, short term degradation unlikely. However, long term degradation may occur.

### 13 – DISPOSAL CONSIDERATIONS

**WASTE DISPOSAL:**

For small amounts absorb with sand, vermiculite or similar and dispose of to an approved landfill site. Contact the manufacturer for additional information if larger amounts are involved.

**LEGISLATION:**

Dispose of in accordance with relevant local legislation.
